III. Oracle Error Messages

In addition to the above messages, you may also encounter Oracle error messages. Oracle messages usually contain key words such as ORA-.

Oracle messages are too numerous to discuss in this Guide, and may occur for any number of reasons. However, several of the more common ones are listed below. Normally those reasons are beyond the control of a CAO user to fix. If such messages are encountered, users should record them, and pass them on to the local DBA or Systems Administrator for resolution.

MESSAGE	CAUSE
ORA-00001 unique constraint (<i>table.column</i>) violated	An update or insert statement attempted to insert a duplicate key.
ORA-02291 integrity constraint (<i>str.name</i>)violated -parent key not found	An attempt was made in INSERT or UPDATE a foreign key value; the result was a value that is not in the parent key.
ORA-02292 integrity constraint (<i>str.name</i>)violated -child record found	An attempt was made to delete a row that is referenced by a foreign key.
